#### Notes:

- 1. Investment managers may choose to identify and report on tenant controlled energy consumption from renewable energy sources
- 2. Recommended unit of measure for data disclosure is by area, investment manager may identify and report on KPIs on value (AUM basis)
- 3. Explain the methodology used to calculate this indicator and/or to determine the components used
- 4. Best practice would be for these disclosures to be made using the existing carbon intensity carried forward with no change and also a prediction which would consider planned initiatives to reduce GHG emissions, that have been costed and included in business plans
- 5. See Appendix 1 under ESG15 in the INREV Sustainability module
- 6. New registration, might be subject to change
- 7. For the full list of certificates/energy rating schemes, see INREV ALI ESG data fields which is referenced to GRESB Asset Spreadsheet
